

Third Party Technical Cyber Security Review Certificate

Malmö, Tuesday, 10 October 2023

Swedish Cyber Security Company SQRL AB, 559326-9797 has conducted an independent third-party technical cyber security review (penetration test) of the app.oneflow.com Application and Cloud Infrastructure Setup by Oneflow AB.

Throughout the security review, the Oneflow team demonstrated commendable efficiency and collaboration. Over the course of the penetration test, the majority of the identified vulnerabilities were promptly addressed and resolved. By the conclusion of the security review, no critical, high, or medium-impact security vulnerabilities remained that could be used for stealing or manipulating information. Only six low-severity weaknesses were still present at the end of the security review.

In September and October 2023, Principal Cyber Security Consultant Anton Linné conducted testing of the services for a period of approximately nine (9) days.

Scope for the penetration test:

Application / Asset	URL(s) / Accounts	Description
Flowsystem/react-client	https://app.oneflow.com	Frontend / Client Application
Flowsystem/API	https://app.oneflow.com/api	Core API / Backend
Flowsystem/oneflow-nginx	https://app.oneflow.com	Nginx config
AWS (oneflow-production)	<REDACTED>	AWS Resources
AWS (oneflow-backups)	<REDACTED>	AWS Resources

The methodology used is based on the OWASP Testing Guides, NIST SP 800-115 and OSSTMM.

All detailed findings are available on request.

Anton Linné
